About the document

This document contains all the IDM submodels for the simplified version of the TIM website proposed for the Hypermedia project of 2016. The only thing to note is that we have added some additional topic pages for “The Group” because we already implemented some of them before the exact specification was released (and we didn’t want to waste the work done).

For the C-IDM, L-IDM, P-IDM we used the draw.io online tool. For the mockups we used Balsamiq.
